discolor hybrids—(Slocock)

Colors: white; pale pink; pink with dark center. These have proved fairly hardy (b) if planted under about 50% shade. They are slow to begin blooming, but have very large florets and trusses. Their blooming time is after the late Catawbiense hybrids. They have been used successfully in the Philadelphia suburban areas.

discolor hybrids—(Dexter) B.C.-b

Colors almost all pale pink. Flowers somewhat smaller than above but appear to bloom sooner and may be somewhat hardier.

Fortunei hybrids B.C.-b.d.

These vary considerably but some are very worthwhile. The best one we have is Gloxineum (see list), one of Dexter's seedlings. Some clones have a fine fragrance, but oddly enough, this occurs in the lighter colored flowers.

A few of the varieties listed we do not grow at this time, but we have included them in this list because the key letters illustrate our experience with them in former years.
